

HydroScope Energy

Investment

- Products for energy

Main goal is to produce revolutionary energy devices that make a quantum shift for mankind's energy needs.

- Development

Aim to establish new lab to research the physics, test and assemble first products candidates.

- Factory plant

Step two: establish factory plants for the different product lines.

- Marketing

Establish foundation and PR to market the products.

What is Hydroscope energy?

HydroScope stands for a new series of physics and understanding of how we can utilize this into commercial products.

The aim is to fast come to market with new designed products. That fills the emerging need of clean and endless energy. It is a revolution behind the corner for mankind.

Imagine a new world of products:

#1: Home and utility, device that delivers all your energy you need to your home.

Large as a refrigerator, fit for even small homes. Forget expensive bills, long distant wires, polluting power plants etc.

#2: Transport: energy devices that replaces all needs for gasoline and fossil fuel.

#3: Further development shrink devices for any device that needs electricity.

Mobile phones, toys etc.
